ACTIVE CARE ENDPOINT PROTECTION MANAGED SERVICE

Protect your most important assets with multilayered, worry-free and expert-managed endpoint security

Today, the majority of organizations, regardless of size or industry, have realized that Cybersecurity is a huge issue with a severe impact on operations.
Simultaneously, their IT staff is usually overwhelmed with the daily administration tasks and keeping systems running. Time is a luxury, and cybersecurity is often overlooked in favor of other priorities. New threats emerge constantly, and the growing sophistication of cyberattacks demands swift action and expertise. Many IT teams are struggling to do that, while many SMBs don't even have an IT team.

Based on industry standards and best practices, we design your overall protection policy. On a regular basis, you receive a report with all our actions and threats mitigated, that would otherwise have infiltrated your IT systems to wreak havoc. Inter Engineering Active Care Managed Services are modular because not all organizations have the same requirements. Together we form the suitable plan according to your needs.

We secure your workstations and servers from malware, malicious websites, ransomware and 0-day threats. This is the ultimate outsourcing solution for the protection of an organization's IT infrastructure against malware, with no administration overhead for either the customer or the reseller.

SERVICE BENEFITS

- Multilayered protection for your systems

- Operated by our security experts. You don't do anything

- Most cost-effective solution

- You don't buy software, but pay as a service

- Stop whenever you like

MULTI-LAYERED DEFENSES
Current threats come in great diversity, and modern endpoint protection suites should employ a multilayered approach to providing security. These different protection features are built into our solution. If a threat escapes one layer, there is still another layer that can catch it.

RANSOMWARE PROTECTION
The ransomware protection module recognizes and blocks attempts to make harmful modifications to local files and in network shares.

NO ADMINISTRATION
This is a service managed entirely by Inter Engineering security experts. We monitor the security status of your systems, so you don't have to. In case of a cybersecurity emergency, we work together with your IT team or partner to eradicate the threat.

NO HIDDEN COSTS
The service is subscription based and that's all you pay. We will not ask you to pay for extra features or better service levels.

REPORTING
On a regular basis, we will provide you with a report detailing all actions performed to protect your organization.

Managed Services are available through the Inter Engineering partner channel.
