

NO ADMINISTRATION

This is a service managed entirely by Inter Engineering security experts. We monitor the security status of your systems, so you don't have to. In case of a cyber security emergency we work together with your IT team or partner to eradicate the threat.

TARGETED RESPONSE

If a cyber attack is confirmed our engineers can take immediate actions to remove the threat.

NETWORK ISOLATION

Depending on the severity of the attack an endpoint can be automatically isolated from the network in order to stop the attacker from moving to other endpoints.

ADVANCED FORENSICS

Our engineers can gather artefacts of the breach in order to gain more insights of the mechanics of the attack.

NO HIDDEN COSTS

The service is subscription based and that's all you pay. We will not ask you to pay for extra features or better service levels.

REPORTING

On a regular basis we will provide you with a report detailing all actions performed to protect your organization.

Most SMBs don't have an IT Department and for those that do, their IT staff is often overwhelmed with the daily administration tasks and keeping systems running. Time is a luxury and cyber security is neglected in the expense of other contingencies.

On the other hand, Cyber security is becoming a huge issue with severe impact in modern organizations regardless size or industry. New threats emerge constantly, while the rising degree of sophistication in the cyber-attacks makes it difficult for the IT teams to focus on these matters or even re-configure their protection in a timely manner.

Effective pre-compromise threat prevention is the cornerstone of cyber security, but you can't rely on preventive measures alone to keep your business and its data safe from the Tactics, Techniques and Procedures adversaries use in targeted attacks. You need a solution that uses advanced analytics and machine learning technologies to shield your organization against advanced cyber threats and breaches. With the EDR service our security experts offer advanced threat identification and built-in guidance with option to automate remote response actions. This way we detect and stop targeted attacks quickly and efficiently at the very early stages. The EDR service integrates seamlessly with the EndPoint Protection service and also with all major endpoint protection products.

- Unprecedented breach detection
- Response actions to mitigate the attack
- Operated by our security experts with minimum interaction and effort from you
- Most cost effective solution
- You don't buy software, but pay as a service
- Stop whenever you like
