Cryoserver™

Cryoserver Software

Cryoserver is available as software only to run on your own hardware appliance or virtual machine with Linux or Windows operating systems. The Cryoserver software is licensed on a per Active user subscription enabling you to have a very cost effective onpremise solution.

Key features

- Use existing infrastructure - your own familiar hardware
- Flexible and scalable - in line with changing business structures
- Adapatable - ideal for virtualised servers
- Office 365 compatible - the perfect partner to Office 365
- Competetive price plan - low implementation costs
- Platform independent - same great solution, no matter the delivery method
- Quick and easy install - no on-premise attendence required

The only email archiving software you need

- Perfect for businesses with mature infrastructure
- Easily integrated within a data centre
- Control your own data within your own business
- Choose your own storage method
- Make the most of your own unused storage
- As user count increases continue to allocate storage as you choose

Benefits

- Expandable to match increasing volume and complexity of messages
- Virtualisation makes for adaptable processing power on the fly
- Fastest on-premise install
- No onsite engineering support required
- No limit on storage capacity
- Easily incorporated into a hybrid solution

Cryoserver has saved us time on back up requests and etrievals, recovering something off a tape is never a two minute job

-Gary Hancock
North Warwickshire Council

In theory people could delete their whole mailbox if they wanted to without losing any valuable information, thanks to Cryoserver

-David Chatterton
South Liverpool Homes
